

Origami fox puppet

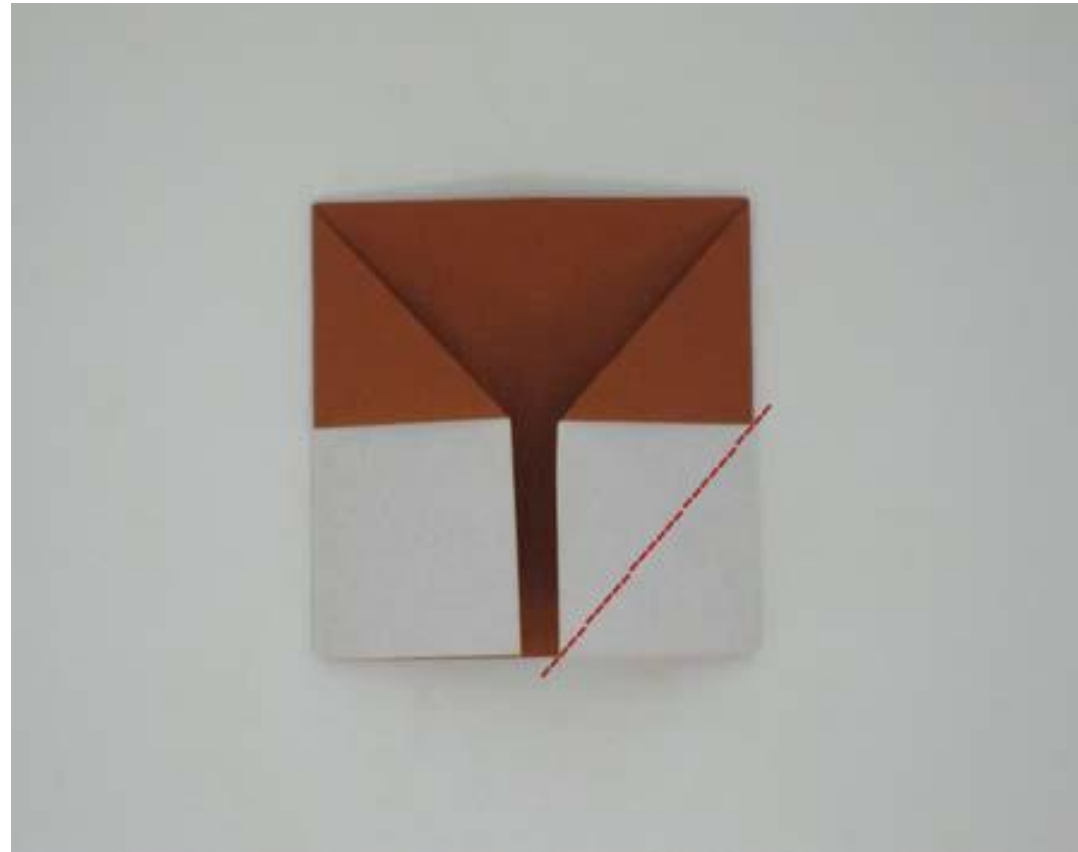

First make the paper into what is called an organ shape, fold in half, then both sides in and squash into a roof shape.

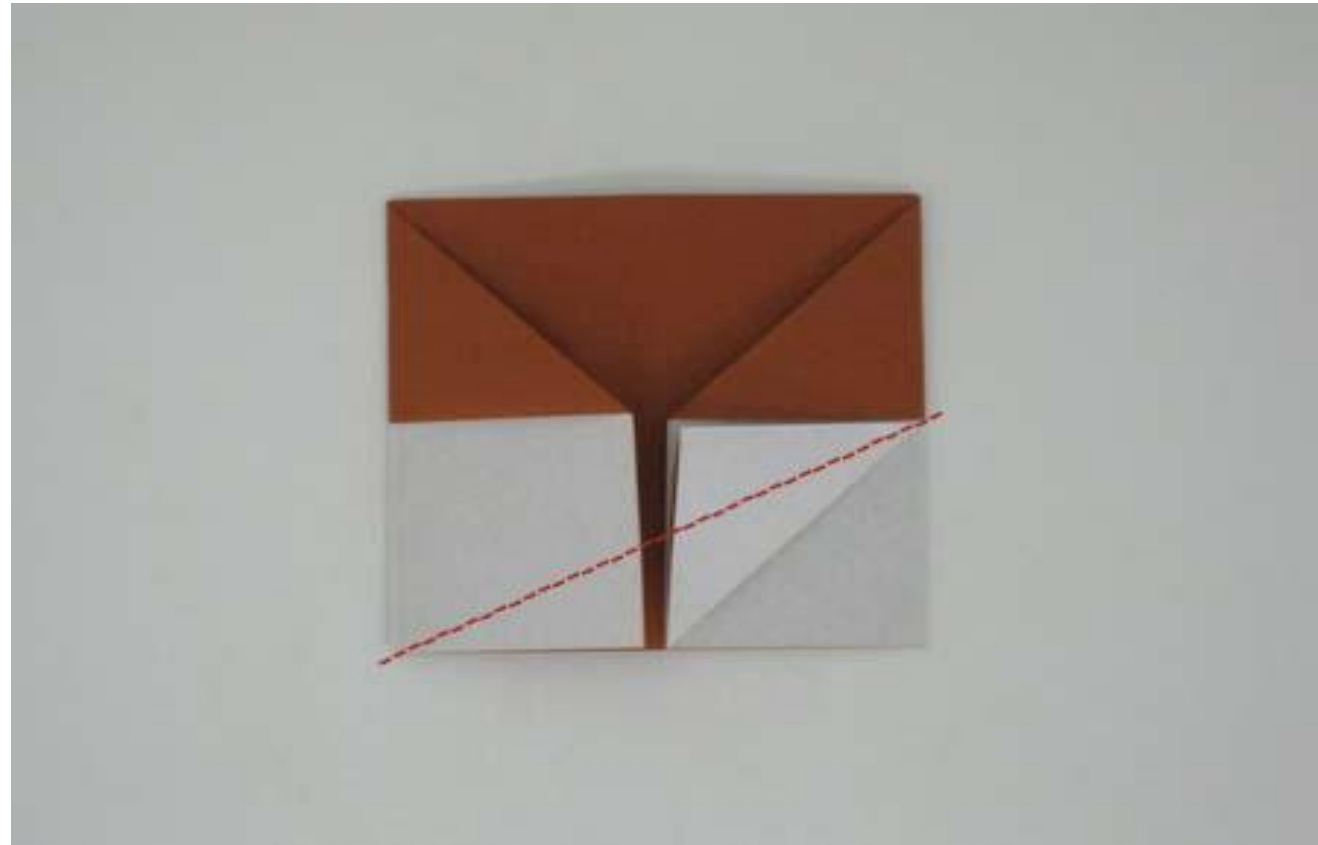

Then turn over.

Fold both sides into center, then fold bottom right corner up along line.

Then starting from the same corner do the next fold along line.

Fold the bottom half of that side of paper up along the middle line.

It should look like this!
Then turn over.

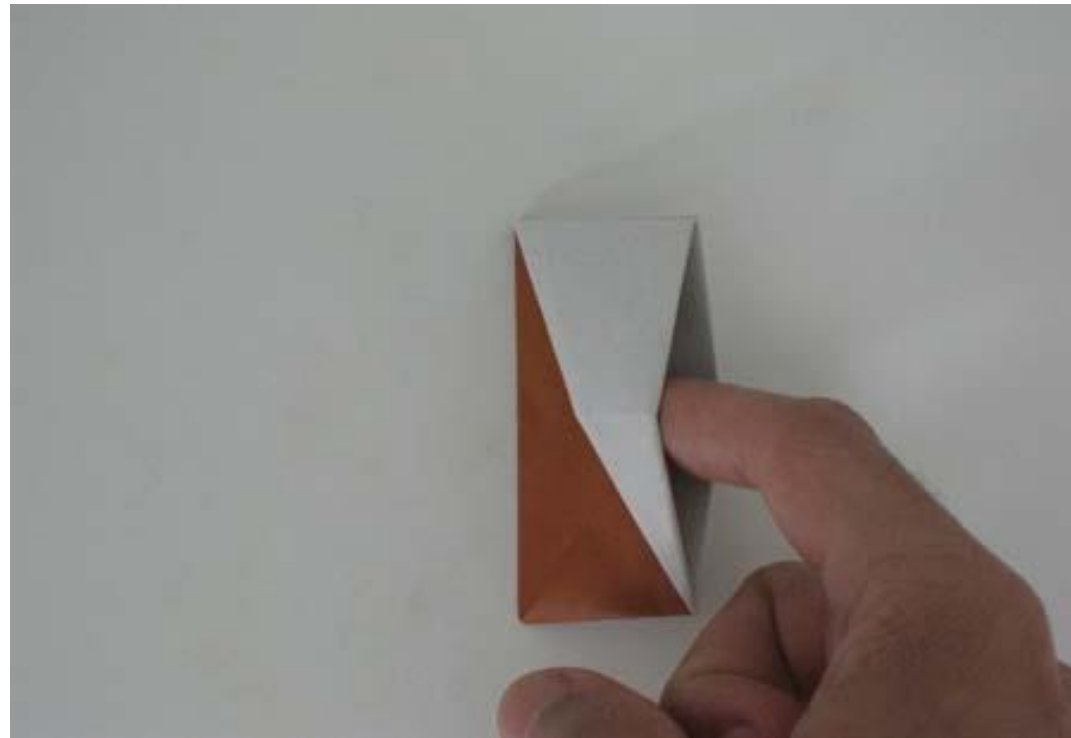

Then do the same to the other side so it looks like this! Nearly there now.

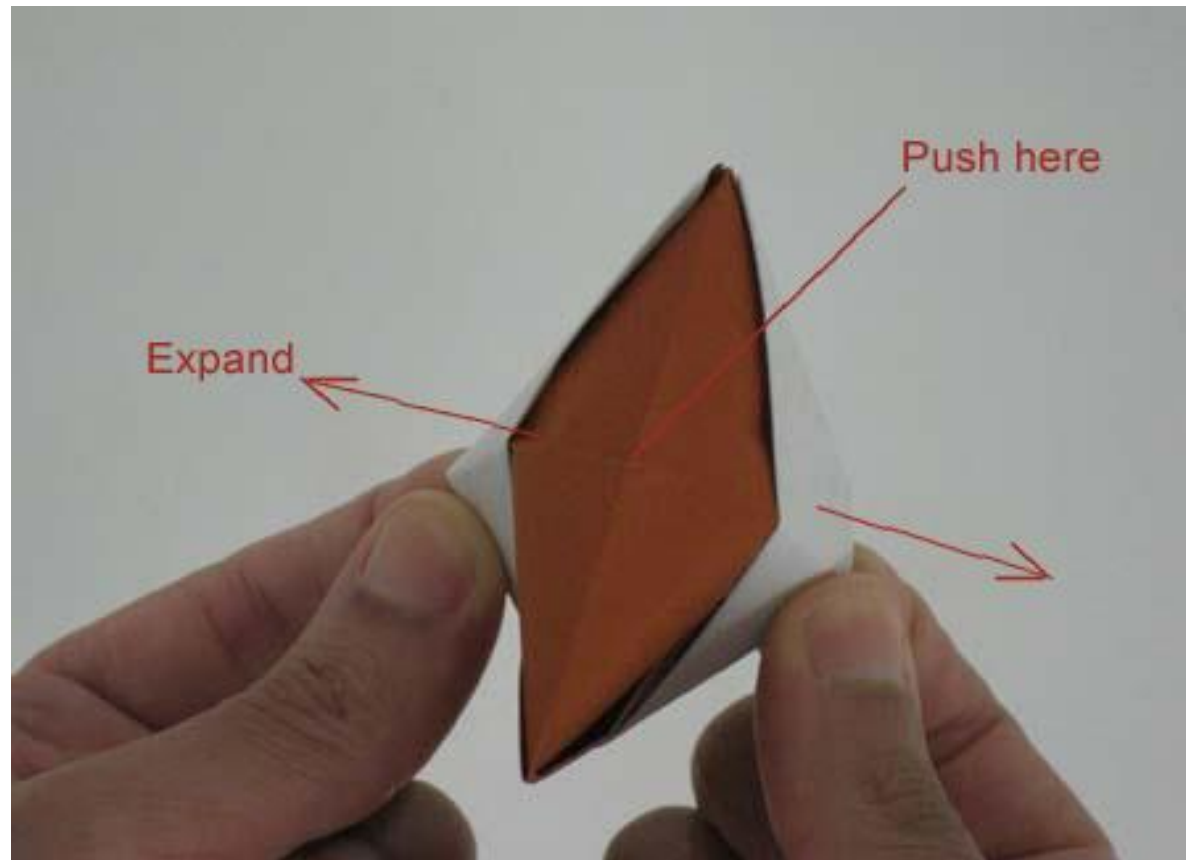

Turn the paper this way around.

Start to shape your fox by putting your finger inside it

Start to bring his/her ears out

Use your thumbs to help make the mouth

And there we have it, you can adjust ears to make other animals and decorate. I look forward to seeing your creations.
